Home Dashboard

Features · https://scopematch.com/docs/home-dashboard/

Overview

The Dashboard is your central starting point in ScopeMatch. It gives you a snapshot of your account activity, profile health, and key supply chain insights. From here, you can quickly review supply lists, see single-sourced products, and review your network connections, all in one place. The Dashboard brings together insights from your Company Profile, Product Supply, and Network Analysis to give you a complete picture of your supply chain in one place.

Plans

Available on every plan. The charts and stats you see depend on your plan. Is there anything you'd like to see on your dashboard? Let us know at helprequest@scopematch.com. See Tiers and Features.

When to Use It

Use the Dashboard whenever you need an at-a-glance overview of your current status:

1. Checking the **number of active supply lists** and products.
2. Checking **profile completion** to improve visibility.
3. Identifying **single-sourced products** that may pose risks.
4. Reviewing **pending notifications** and new updates.
5. Viewing your **overall connection count** across the platform.

Step-by-Step Guide

1. **Users Tile** – Shows how many active users are in your organization.
2. **Supply Lists Tile** – Displays the number of product supply lists you've created.
3. **Single-Sourced Products Tile** – Alerts you to products currently sourced from only one vendor or country.
4. **Connections Count Tile** – Total number of active vendor or partner connections linked to your profile.
5. **Profile Strength** – Progress bar that indicates how complete your profile is. Completing fields like industries, certifications, values, and product catalog will increase this score.
6. **Pending Notifications** – Shows new alerts or actions requiring attention.
7. **Map View** – Displays a geographic overview of your connections and sourcing activity.

Best Practices & Tips

Do:

1. Regularly check your **Profile Strength** - a complete profile increases exposure in vendor searches.
2. Use the **Single-Sourced Products** tile as an early warning system for supply risk.
3. Keep your **Connections** updated to maintain accurate mapping on the dashboard.

Don't:

- Ignore **Pending Notifications** - these may include important updates like vendor confirmations, new connection requests, or validation alerts.
- **Overlook profile completion** - low profile strength reduces your visibility to potential partners.

FAQs

- **What does "Single-Sourced Products" mean?**

- These are products only linked to one vendor, making them vulnerable to supply disruption.

- **How can I improve my Profile Strength?**
  - Fill in missing fields in your company profile (industries, certifications, locations, product catalog, audits, etc.).

- **How do I activate data on the map?**
  - Add vendor connections with confirmed locations in your Product Supply lists. These will automatically display on the map.

- **How does the Dashboard connect with other features?**
  - It pulls data from Company Profile, Product Supply, and Network Analysis to give you an up-to-date overview in one place.

Troubleshooting

- **If the map doesn’t display data** → Check that your connections have validated locations.
- **If Profile Strength doesn’t update** → Refresh your browser; if still stuck, re-save your profile details.
- **If Supply Lists count is incorrect** → Verify that lists were properly saved in the Product Supply tab.
